HUNTER CLADE

FIREFIGHT PLOY

SCRAPCODE OVERLOAD

The Hunter Clade's Infiltrator releases an enormous bombardment of static and scrapcode that disrupts communication channels, reduces enemy coordination and allows the kill team to seize objectives and materiel from under their foe's nose.

Use this firefight ploy when a friendly **HUNTER CLADE INFILTRATOR** operative is activated. Alternatively, use this firefight ploy when a friendly **HUNTER CLADE INFILTRATOR** operative, or an enemy operative within 3" of that friendly operative, would perform the **Pick Up Marker** or a mission action (excluding **Breach** and **Operate Hatch**). Until the start of that friendly operative's next activation, whenever determining control of a marker, treat the total APL stat of enemy operatives that contest it as 1 lower if at least one of those enemy operatives is within 3" of that friendly operative. Note this isn't a change to the APL stat, so any changes are cumulative with this, and this can change control of a marker before performing the action.
