

- For the purpose of determining control of markers and areas of the killzone, treat its APL stat as 1. This takes precedence over any stat changes.

A friendly **FELGOR RAVAGER** operative that has one of your Frenzy tokens is incapacitated when one of the following is met:

- Its activation or counteraction ends.
- An enemy operative is fighting against or retaliating against it and your opponent strikes with a critical success.
- An enemy operative is fighting against or retaliating against it and your opponent strikes it for a second time with a normal success. Note this can be strikes from two different **Fight** actions.
- An enemy operative is shooting it and Critical Dmg is inflicted on it.
- The battle ends (resolve this before any victory conditions that resolve at the end of the battle).

Your opponent treats a **FELGOR RAVAGER** operative as being incapacitated (instead of when it would be incapacitated normally) when it gains one of your Frenzy tokens for the purposes of scoring VPs (e.g. kill op) and faction rules that require it to be incapacitated (e.g. **HAND OF THE ARCHON** Power From Pain, **CHAOS CULT** Mutation, etc.).
