

In a killzone that uses the close quarters rules (e.g. Killzone: Tomb World), your **TUNNEL** and the distance between your Tunnel markers can be measured through Wall terrain. In a killzone that uses the hazardous areas rules (e.g. Killzone: Bheta Decima), for the purposes of the Restricted Movement rule, parts of a Tunnel marker that are touching a hazardous area are treated as a hazardous area.

In this example, operative A is on your **TUNNEL** as it's on the area between markers 0 and 1. Operative B is also on your **TUNNEL** as it's touching one of your Tunnel markers. Operative C is not on your **TUNNEL** as markers 1 and 3 are not sequential, so the area between those markers is not part of your **TUNNEL**.
